The world's first Collective Intelligence Management Solution!

Vistime for SharePoint is the world's first collective intelligence management solution that combines the powerful online collaboration and versatile universal file viewer of Vistime with the "enterprise search, accelerating shared business processes, and facilitating information-sharing capabilities" of SharePoint. **Vistime for SharePoint empowers organizations to mine the wealth of its knowledge resources across the enterprise.**

Vistime for SharePoint allows a session owner to invite colleagues, clients or any number of nominated participants into a secure session during which, all involved will be able to simultaneously view and interact with any supported document, image, video or 3D image through a simple and common interface, without the need for the originating software

Vistime CIM for Sharepoint delivers meaning based computing technology that assists in automated decision making in over 70 applications that have embedded Sharepoint's solution and has the plug-in capacity to support over 1000 different file formats and connect to 400 different types of information sources.

Collective Intelligence Management

Vistime for Sharepoint redefines online collaboration to provide the market's first collective intelligence management platform.

Vistime helps users arrive at an intelligent, informed decision by accessing more information sources and providing various tools, methods and processes that lend greater insight.

Collective Intelligence Management with Sharepoint

Vistime CIM is a communication software platform that combines the fast response of a native desktop application with the connectivity of the web. Vistime CIM has an open plugin system to enable extensions for application specific integration such as with Microsoft Sharepoint and social applications), file support (domain specific formats) and interaction behavior (3d/2d/video).

This extensible plugin architecture and performance orientated method of client operation is what makes Vistime CIM a truly unique architecture. Vistime CIM can transport single user web applications to multi user applications.

Online Collaboration	Collective Intelligence Management with Sharepoint
Adobe Connect Pro (current), Webex, Gotomeeting etc.	Vistime CIM for Sharepoint
No search across assets or past online meetings	Search across all assets, user profiles and past meetings. Match with past meetings can help complete the current task faster based on reference to prior experience.
No automated dynamic suggestions to relevant content in the repository.	In real-time, users will be suggested additional content and experts that are the most relevant to the current discussion.
No significant common assets used or generated from current sessions	Online asset includes – past meeting recordings, knowledge base, user experience profiles, corporate databases, file systems, external information sources etc.
Cannot view files of all file formats for collaboration unless the presenter has the appropriate application	Universal file viewer can help view any file of any format and version (even if none of the participants have the application on their machines)
Does not leverage wisdom of the crowd/employees	Leverages the knowledge of employees, partners, customers to help decisions.
Significantly used for one way presentations	Suited for accomplishing tasks through live real time collaboration across multiple users
When employees leave, all the experience and intelligence is lost	Every interaction is recorded and conceptually analyzed. These recordings are corporate assets that develop over time, are reusable and increase in value in spite of the participants leaving the company or projects.

Talk about other solutions for sharepoint that can be connected to vistime.

Firmware Technologies through its integration of vistime with Sharepoint will be offering to the market a Collective Intelligence management platform through the Vistime CIM

- Provide conceptual search and retrieval of documents
- Provide automated assistance during collaboration to facilitate realization of the desired goals faster
- Enable management of the hosted content

Instantly share large images and information!

Vistime meets the growing demand of Sharepoint users to collaborate and share large images and information instantly!

Vistime's universal file viewer is the only collaboration engine that can transfer and display files of any size at "warp speed" in native format. The powerful Vistime engine is the technological equivalent of sending a whole elephant through a narrow pipeline and having it instantly reappear intact on the other side. Vistime eliminates lag and latency while retaining original quality and integrity of rendering.

Vistime's unique automatic synchronization technology ensures that all collaboration session participants anywhere in the world are viewing the exact same file, media and mark-ups in real time. This expedites knowledge transfer and maximizes collaboration effectiveness and timely results.

Vistime's versatile file viewer can also display virtually any type of file regardless of the application that created it. This includes rich media and graphics and highly specialized, complex and often massive files like X-rays, CAT scans, MRI images, architectural blueprints, 3D models, autocad files, thermal images, engineering schematics, musical scores, video, scanned digital images, etc.

Only Vistime enables 24/7 interaction without limitation in any number of simultaneous collaboration sessions for virtually any number of concurrent participants.

As a result, Vistime empowers organizations to efficiently assemble teams, get rapid access to knowledge resources and accelerate results through interactive collaboration.

Better, faster, more informed decisions

Key Benefits

Vistime facilitates rapid decision making, collective knowledge sharing, time-zone independent global collaboration, virtual meetings, e-learning and sophisticated document, data and media sharing and management. Vistime delivers tangible business benefits, including:

- Better, faster, more informed medical decisions
- Exponentially improved productivity through more efficient, timely work flows and pooled knowledge
- More efficient, effective communication and collaboration within and across multi-functional, globally dispersed medical teams,
- Dramatic reductions in travel costs for meetings, training and events
- Virtually eliminating non-productive time wasted traveling to meetings, training and events
- Collaboration on the fly in real time with instant access to any relevant files and knowledge workers
- More engaged customer relationships and superior customer service

Vistime provides rapid return on investment (ROI) by dramatically increasing productivity and streamlining faster, broader, more effective communication while simultaneously cutting operational costs by reducing time-consuming meetings and minimizing the need for travel.

Vistime's unique features include

- unparalleled speed:-
 - instantaneous secure sharing of virtually any size or type of file
 - immediate "warp speed" file transfer, regardless of remote network connection speed or bandwidth
- versatility:-
 - ability to present hundreds of complex file types, including 2-dimensional and 3-dimensional images, audio and video formats
 - single, easy to use tool for all of an organization's collaboration, online meetings, e-learning and complex large-scale file sharing needs
- time zone independence – extended perpetual collaboration sessions
- control:-
 - real-time mark-up and comment capture layered and color-coded by individual participant
 - ability to determine access, mark-up and download privileges
 - complete retention and recall of all original file images plus mark-ups, notations and comments
- tight security -- highly secure double encryption using 256 bit Advanced Encryption Standard (AES) and Secure Socket Layers for all documents and files.

Launch vistime!

Vistime for Sharepoint empowers, engages and unites your team members, saving time, money and significantly increasing your business return on investment.
